○ comes in two parts

GALA® FRAME

Patented hand welded steel frame which contains the ceramic glass. Fixed with only two bolts which makes maintenance -however low-very convenient.

TECHBOX

The Techbox protects the gas valve and all electronics required to make the Gala® do it's magic. There is no need for a hatch in any wall, everything is accessible through the combustion chamber after removing the Gala® frame.

PIEZO

Pre-burner ignition. This reliable device ensures that the gas is only allowed to enter the main burner if a fire is detected. If any irregularity occurs, a safety-procedure will be activated and the gas valve will be immediately shut down.

GASFLEX

This CE approved flexible consists of a stainless steel tube with a socket, to be hardwired to your existing gas pipe. This makes connecting a Gala® to the gas-network like a walk in the park.

RF REMOTE CONTROL

The 8-button RF remote control is very easy to use. Control your fireplace by the touch of a button. Other features include thermostatic mode, eco-mode, child lock, count-down timer, standby mode.

ADJUSTABLE FEET

Whilst the legs of a Gala® are adjustable at our workshop, on location these hard wearing rubber feet are very clever to level the appliance.

features

FLUETYPE

[Balanced (closed flue)]
When an air duct brings combustion air directly to an appliance, there is no air movement between the room containing the appliance. This makes room sealed appliances intrinsically safe, since products of combustion (POCs) cannot normally escape into the room.

[Classic (open flue)]
An open flued appliance draws combustion air from its surroundings; exhaust gases rise in a vortex up the open flue. This type of fireplace is equipped with an additional safety to prevent the risk of POCs entering the room.

HEAT RECOVERY

Increase the efficiency by connecting the in- and outlets of the heat recovery system to an air vent with our flexible tubes. This is a great addition to the radiant heat provided by the ceramic glass of the Gala®.

FLAME-REFLEX

A clear or black ceramic reflection panel in the combustion chamber creates a deeper view of the fire.

DECORATION

WHITE PEBBLES

GRAVEL

LAVA ROCK/CERAMIC WOOD

Experience a new sensation of natural flames thanks to our various decorative materials. Combine lava rock and ceramic wood logs to create a realistic fire.
